Before You Start

Do not eat, drink (including water), smoke, or chew gum at least 30 minutes before collecting your sample.

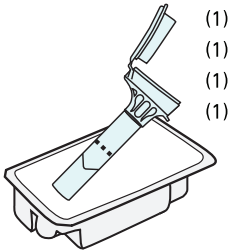

Collecting a sample takes about 2-5 minutes.

Sample must be shipped via FedEx® within 24 hours of collection.

Scan the QR code to watch a quick video that shows each step for collecting and sending your sample.

Instructions are available in other languages. Please see the manufacturer instructions included in your kit for more details.

BAYLOR GENETICS

How to Collect & Ship a Saliva Sample for Testing

WHAT YOU RECEIVED

You have received an individual kit or a family collection kit to collect samples. Each person being tested should have their own kit.

If you are collecting samples from more than one family member, put each person's sample in its own box so they do not get mixed up. The family collection kit packaging sleeve may be thrown away.

If you have any questions or need assistance, please contact Client Services at 1.800.411.4363.

Sample Collection

1

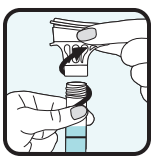

Spit into funnel until the amount of liquid saliva (not bubbles) reaches the fill line shown in picture #1.

2

Hold the tube upright with one hand. Close the funnel lid with the other hand (as shown) by firmly pushing the lid until you hear a loud click. The liquid in the lid will be released into the tube to mix with the saliva. Make sure that the lid is closed tightly.

3

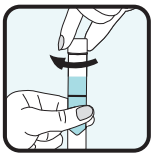

Hold the tube upright. Unscrew the funnel from the tube.

Illustrations and instructions appearing in 'Sample Collection' (steps 1–5) are used with permission from © DNA Genotek Inc. All rights reserved.

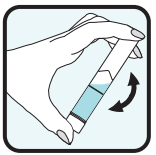

Sample Collection

4

Use the small cap to close the tube tightly.

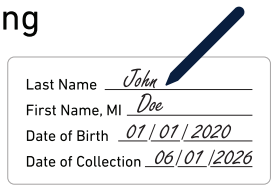

5

Shake the capped tube for 5 seconds. Discard or recycle the funnel.

Labeling

6

Using the blank labels provided and clearly print:

- Name of Person's Sample Being Collected
- Date of Birth
- Date of Collection

Date of Collection is the date the sample was obtained. Use one label per specimen container and attach it to the container(s).

If information is missing, or the tube label does not match what your provider sent, we cannot run the test.

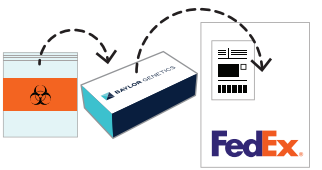

Packaging & Shipping

7

Place the specimen container(s) into the biohazard bag that contains an absorbent pad. Make sure the biohazard bag is completely sealed. Each sample goes in its own biohazard bag. If included, fold the test order form and insert it into the slip pouch, located on the exterior, clear side of the bag.

8

Place the sealed biohazard bag into the collection kit box. Place the closed box in the FedEx® mailer and seal it. Multiple boxes can be put into the same mailer. Unused return mailers can be thrown away.

9

FedEx®

SHIP WITHIN 24 HRS OF COLLECTION (MON-FRI)

Drop off at a FedEx® location or call 800-GoFedEx to schedule a pickup. No account is required; use the tracking number from the FedEx label.
